

Student Enrollment & Course Management System (SECMS)

User Story

- The Student Enrollment & Course Management System (SECMS) is a Salesforce-based application developed to simplify the process of student registration, course selection, enrollment tracking, and academic administration.
- The system provides a centralized platform where students, enrollment staff, instructors, and administrators can manage academic information efficiently.
- It helps reduce manual work, avoid duplicate records, improve communication, and provide better visibility into enrollment activities.

Student Enrollment & Course Management System (SECMS)

User Story

The **Student Enrollment & Course Management System (SECMS)** is a **Salesforce-based** application developed to simplify the process of student registration, course selection, enrollment tracking, and academic administration.

The system provides a **centralized platform** where students, enrollment staff, instructors, and administrators can manage academic information efficiently.

It helps **reduce manual work**, **avoid duplicate records**, **improve communication**, and provide **better visibility** into enrollment activities.

INTRODUCTION

1.1 Project Overview

The Student Enrollment & Course Management System is designed to bring student, course, and enrollment information together in a single Salesforce environment. The system supports important activities such as student registration, course availability, enrollment processing, instructor allocation, payment tracking, and approval management.

By using Salesforce features such as Flows, Validation Rules, Approval Processes, Reports, and Dashboards, the system can automate repetitive tasks and maintain accurate academic records. Administrators can monitor enrollment activities, while enrollment officers can process student registrations and course requests more efficiently.

1.2 Purpose

- The main purpose of SECMS is to and automated as olution for managing student enrollment and courserelated activities.

The system aims to provide:

- Easy management of student information
- Organized course registration
- Faster enrollment processing
- Proper instructor assingment.
- Automated approval and validation
- Secure maintenance of academic records
-

- Real-time reports and dashboards Better coordination between students and staff.

2.IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Enrollment Officer	manage student enrollments efficiently	enrollment data is scattered	systems are manual and unintegrated	frustrated and error-prone
PS-2	Administrator	track enrollments and revenue	reporting is delayed	data is not centralized	uncertain in decision-making

2.1 Problem Statement (Student Enrollment and Course Management System)

2.1 Empathy Map Canvas

User Personal: Enrollment Officer Think & Feel

- Wants to complete registrations accurately

- Wants to avoid duplicate student records
- Feels concerned when enrollment information is incomplete

Hear • Students asking about course availability •
Instructors requesting enrollment information •
Administrators asking for enrollment reports

See

- Student registration details
- Course lists and available seats
- Pending enrollment requests

Say & Do

- Verifies student information
- Processes enrollment requests
- Communicates with students and instructor

Brainstorming & Idea Prioritization

Step 1 – Ideas

- Student Registration
- Online Course Enrollment
- Enrollment Tracking
- Academic Management
- Salesforce Enrollment
- System

Step 2 – Grouping

- Manual: Paper forms, • Spreadsheets
- Automated: • Online registration, Course management
- Cloud-Based: Salesforce SECMS

Step 3 – Prioritization Salesforce SECMS was selected to manage students, courses, enrollments, approvals, and reports in one platform

2. IDEATION PHASE

2.2 Empathy Map Canvas

User Persona: Enrollment Officer

2.3 Brainstorming & Idea Prioritization

1 Step 1 – Brainstormed Ideas

- Spreadsheet automation
- Standalone enrollment portal
- ERP integration
- Salesforce-based enrollment system

2 Step 2 – Grouping

- Manual solutions
- Semi-automated solutions
- Fully automated cloud solutions

2.3 Brainstorming & Idea Prioritization – Student Enrollment & Course Management System (SECMS)

3. REQUIREMENT ANALYSIS PHASE

- Awareness & Registration–Student registration and awareness Course
- Selection – Choosing the required course
- Enrollment Request – Submitting enrollment request
- Fee Payment – Paying the course fees
- Approval – Request approval process
- Instructor Assignment – Assigning an instructor to the student

-
-
-
-

Functional Requirements

FR-1: Student Management – Manage student records.

FR-2: Course Management – Create and manage courses.

FR-3: Enrollment Processing – Request, approve, and reject enrollments.

FR-4: Instructor Assignment – Automatically assign instructors.

Non-Functional Requirements

NFR-1: Usability – The system should be simple, user-friendly, and easy to navigate.

NFR-2: Performance – The system should requests respond quickly and process efficiently.

NFR-3: Security – Student and course data should be protected from unauthorized access.

NFR-4: Reliability – The system should work consistently with minimal failures or downtime.

NFR-5: Scalability – The system should support an increasing number of students, courses, and instructors.

Data Flow Diagram

4.PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

Student Enrollment & Course Management System (SECMS)

Streamlined Enrollment | Centralized Data | Automated Processes | Better User Experience

4.2 Proposed Solution – Functional Requirements

- **Parameter: Problem**
- **Description:** Manual enrollment handling and time-consuming administrative processes.
- **Parameter: Solution**
- **Description:** Salesforce-based SECMS for managing students, courses, enrollments, payments, and approvals.
- **Parameter: Novelty**
- **Description:** End-to-end automation of course student enrollment and the management process.
- **Parameter: Social Impact**
- **Description:** Improves student experience through faster processing and transparent enrollment.

4.3 Solution Architecture

5.PROJECT PLANNING AND SCHEDULING

5.1 Project Planning

- Agile Methodology – The project follows an Agile approach to support flexible development and continuous improvement.
- Epics → Stories → Story Points – Project requirements are divided into epics, user stories, and story points to estimate the effort required.
- Sprint-Based Execution – Development activities are completed in short sprints, with each sprint focusing on specific features and tasks.
- Velocity Calculation – Team velocity is measured based on completed story points

and used to estimate the work that can be completed in upcoming sprints.

- Progress Tracking – Sprint reviews and regular updates are used to monitor project progress and identify pending tasks.

6. Project Development

Phase: Project Flow:

- Milestone 1: SalesforceDeveloper Account Creation
- Milestone 2: Custom Object Creation (Student, Course, Enrollment, Instructor) Milestone3: Tabs Creation.
- Milestone 4: Lightning App Creation
- Milestone 5: Fields Creation
- Milestone 6: Create Relationships v
- Milestone 7: PageLayout Customization
- Milestone 8: Validation Rules
- Milestone 9: Flows (Automation)
- Milestone 10: Approval Process
- Milestone 11: Reports
- Milestone 12: Dashboards
- Milestone 13: Security Setup
- Milestone 14: Conclusion

Milestone 1 – Salesforce Introduction Introduction:

Salesforce is a cloud-based platform used to manage business processes, customer information, and organizational activities. It provides various tools that help organizations store data, automate tasks, and improve overall productivity.

In this milestone, we learn the basic concepts of Salesforce, its main features, and how the platform can be used to build and manage applications.

We also explore important Salesforce components such as Objects, Records, Fields, Automation, Reports, and Dashboards. This milestone provides a strong foundation for using Salesforce in the Student Enrollment & Course Management System (SECMS).

What Is Salesforce?

Salesforce helps is a cloud-based CRM platform that

organizations manage their data, processes, and interactions in one place. It provides tools for storing information, automating tasks, tracking activities, and generating reports.

Salesforce allows users to access their work from anywhere through the cloud. It also supports data management, workflow automation, dashboards, and secure information storage.

For the SECMS project, Salesforce can be used to manage student details, courses, enrollment requests, instructor assignments, approvals, and reports efficiently.

Activity 1: Creating Developer Account:

Creating a developer org in salesforce.

Go to

On the sign up form, enter the following details

First Name: [Your First Name]

Last Name: [Your Last Name]

Email: [Your Email ID]

Role: Developer

Company : CollegeName

County : India

Postal Code : pin code Username :

Click on sign me up after filling these.

Activity 2:

Account Activation:

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.

2. Click on Verify Account
3. Give a password and answer a security question and click on change password.
4. Then you will redirect to your salesforce setup page.

To create the the student custom object:

- Go to Setup in Salesforce.
- Click on Object Manager.
- Click Create → Custom Object.

Enter the details as below:

- Label → Student
- Plural Label → Students
- Object Name → Student
- Record Name → Student Name
- Data Type → Text
- Optional Features → Select Allow Reports, Allow Activities.
- Search Status → Select Allow Search
- Click Save

The screenshot displays the Salesforce 'New Custom Object' configuration page. The 'Custom Object Information' section is active, showing the following details:

- Label:** Student (Example: Account)
- Plural Label:** Students (Example: Accounts)
- Object Name:** Student (Example: Account)
- Description:** (Empty field)

A yellow warning banner at the top indicates that permissions for this object are disabled for all profiles by default. The bottom of the image shows a Windows taskbar with the date 22-09-2024 and time 20:23.

- Track Field History (optional, if you want)

when referenced via the API: Record Name Example: Account Name

Data Type Warning: If you plan to insert a high volume of records in this object, via the API for example, use the Text data type.

Optional Features

- ☒ Allow Reports
- ☒ Allow Activities
- ☒ Track Field History
- ☐ Allow in Chatter Groups
- ☐ Enable Licensing

Object Classification

When these settings are enabled, this object is classified as an Enterprise Application object. When these settings are disabled, this object is classified as a Light Application object. [Learn more](#)

- Label → Enrollment
- Plural Label → Enrollments
- Object Name → Enrollment
- Record Name → Enrollment Name
- Data Type → Text
- Optional Features → Select Allow Reports, Allow Activities, Track History (optional)

The screenshot shows the 'New Custom Object' setup page in Salesforce. The 'Custom Object Definition Edit' section is active. It contains the following fields and options:

- Custom Object Information:**
 - Label:** Enrollment (Example: Account)
 - Plural Label:** Enrollments (Example: Accounts)
 - Starts with vowel sound:** ☐
 - Object Name:** Enrollment (Example: Account)
 - Description:** (Empty text box)

Buttons at the top right of the section: Save, Save & New, Cancel.

- Search Status → Select Allow Search
- Click Save

The screenshot shows the 'New Custom Object' setup page in Salesforce, specifically the 'Enter Record Name Label and Format' section. It contains the following fields and options:

- Record Name:** Enrollment Name (Example: Account Name)
- Data Type:** Text (Warning: If you plan to insert a high volume of records in this object, via the API for example, use the Text data type.)
- Optional Features:**
 - ☒ Allow Reports
 - ☒ Allow Activities
 - ☒ Track Field History
 - ☐ Allow in Chatter Groups
 - ☐ Enable Licensing
- Object Classification:**
 - ☒ Allow Sharing
 - ☒ Allow Bulk API Access
 - ☒ Allow Streaming API Access

The screenshot shows the 'New Custom Object' page in Salesforce Setup. The page has a navigation bar with 'Setup', 'Home', and 'Object Manager'. The main content area includes several sections: 'Allow Sharing' (checked), 'Allow Bulk API Access' (checked), 'Allow Streaming API Access' (checked), 'Deployment Status' (radio buttons for 'In Development' and 'Deployed'), 'Search Status' (checkbox for 'Allow Search'), and 'Object Creation Options' (checkboxes for 'Add Notes and Attachments related list to Default page layout' and 'Launch New Custom Tab Wizard after saving this custom object'). At the bottom are 'Save', 'Save & New', and 'Cancel' buttons.

Milestone 3 - Fields:

1.Student Object Fields:

The screenshot shows the 'Fields & Relationships' section for the 'Student' object. The table lists 8 fields, sorted by field label. The fields are: Address, Created By, Date of Birth, Email, Last Modified By, Owner, Phone, and Student Name. The 'Student Status' field is also listed but is not in the main table view.

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED
Address	Address__c	Text Area(255)		
Created By	CreatedBy	Lookup(User)		
Date of Birth	Date_of_Birth__c	Date		
Email	Email__c	Email		
Last Modified By	LastModifiedDate	Lookup(User)		
Owner	OwnerId	Lookup(User Group)		✓
Phone	Phone__c	Phone		
Student Name	Name	Text(80)		✓
Student Status	Student_Status__c	Picklist		

2: Course Object Fields:

The screenshot shows the 'Fields & Relationships' section for the 'Course' object. The table lists 8 fields, sorted by field label. The fields are: Category, Course Fee, Course Name, Created By, Description, Duration, Last Modified By, and Owner.

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED
Category	Category__c	Picklist		
Course Fee	Course_Fee__c	Currency(18, 0)		
Course Name	Name	Text(80)		✓
Created By	CreatedBy	Lookup(User)

Required

Always require a value in this field in order to save a record.

Clear the value of this field. You can't choose this option if you make this field required.

Activity 2: Create Lookup from Enrollment to Course

Purpose: To link each Enrollment to a Course.

Steps:

- Go to Setup → Object Manager → Enrollment__c.
- Click Fields & Relationships → New.
- Select Lookup Relationship → Next.
- For Related To, select Course__c → Next.
- Enter Field Label = Course (API Name: Course__c).
- Click Next (set visibility and layout) → Save.

The screenshot shows the 'New Custom Field' screen for the 'Enrollment' object. The left sidebar lists navigation options: Details, Fields & Relationships (selected), Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Record Types, Related Lookup Filters, and Search Layouts. The main content area is titled 'New Custom Field' and shows 'Step 1: Choose the field type'. Under 'Data Type', the 'Lookup Relationship' option is selected. Descriptions for other options are visible: 'Auto Number' (system-generated sequence number), 'Formula' (field deriving value from a formula), and 'Roll-Up Summary' (field displaying summary values of a related list).

The screenshot shows the 'New Relationship' screen for the 'Enrollment' object, specifically 'Step 3: Enter the label and name for the lookup field'. The 'Related To' dropdown is set to 'Course'. The form fields are as follows:

- Field Label: Course
- Field Name: Course
- Description: (empty)
- Help Text: (empty)
- Child Relationship Name: Enrollments
- Required: ☐ Always require a value in this field in order to save a record

 The step indicator at the top right shows 'Step 3 of 6'.

Activity 3: Create Lookup from Enrollment to Instructor

.

- Go to Setup → Object Manager → Enrollment__c.
- Click Fields & Relationships → New.
- Choose Lookup Relationship → Next.

Select the page layouts that should include this field. The field will be added as the last field in the first 2-column section of these page layouts. The field will not appear on any pages if you do not select a layout.

To change the location of this field on the page, you will need to customize the page layout. To change the values that appear, you will need to customize the Record Types.

Add Related List Page Layout Name

☒ Instructor Layout

☒ Append related list to users' existing personal customizations

Milestone 5 – Validation Rules:

Activity 1: Student Email Domain Validation

Steps:

- Go to Setup → Object Manager → Student Email__c.
- Click Validation Rules → New.
- Rule Name → Student_Email_Domain_Validation.
- Error Condition → Email must contain @student .edu.
- Error Message → Email must be a valid student institutional email.
- Error Location → Field → Email__c.
- Click Save.

Activity 2: Fees Must Be Paid Before Approval

Steps:

- Go to Setup → Object Manager → Enrollment__c.
 - Click Validation Rules → New.
 - Rule Name → Fees_Must_Be_Paid_Before_Approval. Error Condition
 - → Enrollment Status = Approved AND Fees Paid False.
 - Error Message → Fees must be paid before approving an enrollment.
 - Error Location → Top of Page (or field as needed).
- Click Save.

Milestone 6 – Approval Process

Activity1: CreateApprovalProcessforEnrollmentRequests

Steps:

- Go to Setup → Approval Processes.
- Select Enrollment__c object.
- Click Create New Approval Process → Use Standard Setup.
- Enter Process Name: Approval_Enrollment_Request.
- Set Entry Criteria: Enrollment_Status__c = "Requested". Save and
- configure approval steps (assign to Training Manager).

- Add Approval Step:
- Approver: specific Training Manager user.

- Under Final Approval Actions:
- Add Field Update to set Enrollment_Status__c = "Approved".

- Under Final Rejection Actions:
- Add Field Update to set Enrollment_Status__c = "Rejected".

Activity 2: Creating Remaining Tabs

- Go to Setup.
- In the Quick Find box, type Tabs.
- Under Custom Object Tabs, click New.
- Select Course from the object list → choose a tab style (icon) → click Next, assign to all profiles, then Save.

The screenshot shows the 'New Custom Object Tab' setup page in Step 1. The page title is 'New Custom Object Tab' with a 'Help for this Page' link. Below the title, it says 'Step 1: Enter New Details' and 'Step 1 of 3'. The instructions are: 'Choose the custom object for this new custom tab. Fill in other details.' The 'New Custom Object Tab' section has a dropdown for 'Select an existing custom object or create a new custom object' with 'Course' selected. Below this, there are 'Tab Style' and 'Icon' dropdowns, both with 'Course' selected. An optional section 'Choose a Home Page Custom Link to show as a splash page the first time your users click on this tab' has a 'Search Page Custom Link' dropdown with 'Home' selected. There is a text input field for 'Enter a short description' with a placeholder 'Description'. At the bottom right are 'Save' and 'Cancel' buttons.

The screenshot shows the 'New Custom Object Tab' setup page in Step 2. The page title is 'New Custom Object Tab' with a 'Help for this Page' link. Below the title, it says 'Step 2: Add to Profiles' and 'Step 2 of 3'. The instructions are: 'Choose the user profiles for which the new custom tab will be available. You may also examine or alter the visibility of tabs from the detail and edit pages of each profile.' There are two radio buttons: 'Apply one tab visibility to all profiles' (selected) and 'Apply a different tab visibility for each profile'. Below this is a table with two columns: 'Profile' and 'Tab visibility'. The table lists various profiles and their corresponding tab visibility settings.

Profile	Tab visibility
Analytics Cloud Integration User	Default On
Analytics Cloud Security User	Default On
Anypoint Integration	Default On
Authenticated Website	Default On
Authenticated Website	Default On
B2B Reordering Portal Buyer Profile	Default On
Contract Manager	Default On
Criss Org Data Privacy User	Default On

Custom Tabs

You can create new custom tabs to extend Salesforce functionality or to build new application functionality.

Custom Object tabs look and behave like the standard tabs provided with Salesforce. Web tabs allow you to embed external web applications and content within the Salesforce window. Visualforce tabs allow you to embed Visualforce pages. Lightning Component tabs allow you to add Lightning components to the navigation menu in Lightning Experience and the mobile app. Lightning Page tabs allow you to add Lightning Pages to Lightning Experience and the mobile app.

Custom Object Tab	Tab Style	Description
Admin - Dev	Admin	
Admin - Dev	Admin	
Admin - Dev	Admin	
Admin - Dev	Admin	
Admin - Dev	Admin	

Web Tabs

No Web Tabs have been defined.

Visualforce Tabs

No Visualforce Tabs have been defined.

Lightning Component Tabs

No Lightning Component Tabs have been defined.

Milestone 8 - The Lightning App

Activity 1: Creating the Lightning Application for the Project

Steps:

- Go to Setup.
- In the Quick Find box, type App Manager.
- Click New Lightning App.
- Enter App Name: Student Enrollment & Course Management (Developer Name auto-fills, Description optional).
- Click Next → choose App Branding (optional logo/color theme).
- Select Navigation Style: Standard Navigation.
- Click Next → assign the app to profiles (Admin, Enrollment Officer, Instructor). Click Next → add tabs:
 - Student
 - Course
 - Instructor
 - Enrollment
 - Reports
 - Dashboards
 - Home
 - Tasks
- Click Next → review app settings. Click Save & Finish.

App Name	Developer Name	Description	Last Modified Date	App Type	Publish Status
1. Agentforce Grid	AgentforceGrid	Access Agentforce Grid	8/16/2024, 1:52 PM	Lightning	✓
2. Agentforce Studio	AgentforceStudio	Agentforce Studio	8/16/2024, 1:52 PM	Lightning	✓
3. All Tabs	AllTabSet		8/16/2024, 1:52 PM	Classic	✓

Activity 2: Separate Page Layouts for Each Enrollment Record Type

Purpose: Show different fields for New Enrollment vs ReEnrollment. Steps:

- Go to Setup → Object Manager → Enrollment__c → Page Layouts.
- Click New → create layout for New Enrollment.
- Clone from existing Enrollment Layout.
- Name = New Enrollment Layout → Save.
- Keep fields relevant for first-time enrollment:
- Student, Course, Instructor, Enrollment Date, Status, Fees, Comments. Remove unnecessary
- Re-Enrollment fields (if any).
- Click Save.

Again, click New to Create Re-Enrollment Layout steps:

- Open Enrollment__c → Page Layouts and select New.
- Choose an existing Enrollment Layout as the template and name the new layout Re-Enrollment Layout.
- Add relevant fields such as Previous Enrollment, Re-Enrollment Reason, Status, Fees, and other required details.
- Remove fields that are not needed for the re-enrollment process.
- Click Save to complete the layout.

- Click Page Layout Assignment → Edit Assignment.
- For each profile and record type:
- New Enrollment → use New Enrollment Layout.
- Re-Enrollment → use Re-Enrollment Layout.
- Click Save.

Activity 3: Enrollment R Addelated Lists to Parent Objects:

Steps:

a) Student → Enrollment Related List

Go to Setup → Object Manager → Student__c → Page Layouts.

Open the main layout.

In the palette, select Related Lists.

Drag Enrollments related list onto the layout. Customize columns if needed → Save.

- b) Course → Enrollment Related List
- Go to Object Manager → Course__c → Page Layouts.
- Open the layout.
- Add Enrollments related list. Click Save.
- c) Instructor → Enrollment Related List
- Go to Object Manager → Instructor__c → Page Layouts.
- Open the layout.
- Add Enrollments related list. Click Save.
-
-

• Student → Enrollment Related List:

Course → Enrollment Related List :

Instructor → Enrollment Related List :

Milestone 10 – Automation with Flow

Activity1: Auto-PopulateEnrollmentDate(RecordTriggered Flow)

Steps:

- Open Setup and navigate to Flows → click New Flow.
 - Choose Record-Triggered Flow and select Create.
 - Set the target object as Enrollment__c.
 - Configure the flow to run when a new Enrollment record is created.
- Select Actions and Related Records under optimization, then click Done.

Update Enrollment Date Automatically:

Add an Update Records element to the flow.

Set the element label as Set Enrollment Date.

Select the record that triggered the flow for updating.

Choose the field Enrollment_Date__c.

Set its value to \$Flow.CurrentDate.

This automatically stores the current date in the Enrollment Date field.

Save as SetEnrollmentDate → Activate.

Activity 2: Send Email When Enrollment Approved

- Create an Email Template and Email Alert to inform the student about approval.
- Go to Setup → Flows → New Flow.
- Select Record-Triggered Flow and choose Enrollment__c.
- Set the trigger to run when an enrollment record is updated.
- Add the condition Enrollment_Status__c = "Approved".
- Configure the flow to send the email notification, alert the Admin, and update the Student status to Active.

Add Get Records to fetch related Student__c.

Add Action (Email Alert) to send email to student.

Add Action to notify Admin if needed.

Add Update Records to set Student__c.Status__c = "Active".

Save as Enrollment Approved Action → Activate.

Activity 3: Auto-Assign Instructor Based on Course Category

Rules:

- Technical → Instructor A
- Language → Instructor B
- Non-Technical → Instructor C

Steps:

- Prepare Instructor__c records with codes (e.g., INSTR_A, INSTR_B, INSTR_C).
- Go to Setup → Flows → New Flow → choose Record-Triggered Flow.
- Object = Enrollment__c, Trigger = Created or Updated.
- Add Get Records → fetch related Course__c (use Enrollment__c.Course__c).
- Add Decision element → check Course__r.Category__c.
- Outcome 1: Technical
- Outcome 2: Language Outcome 3:
- Non-Technical For each outcome:
- Add Get Records → fetch Instructor record (A/B/C) using code or name.
- Add Update Records → set Enrollment__c.Instructor__c = Get_Instructor_X.Id. Name Flow =
- AutoAssign_Instructor → Save & Activate.

Activity 4: Auto-Create Task for Follow-Up

Purpose: When Enrollment is "Requested", create a follow-up task for Admin. Steps:

- Go to Setup → Flows → New Flow → choose Record-Triggered Flow.
- Object = Enrollment__c, Trigger = Created or Updated.
- Set Condition: Enrollment_Status__c = "Requested".

- Add Get Records → fetch Admin user (by Username or Profile).
- Add Formula Resource → TODAY() + 2 (for due date).
- Add Create Records → Task.
- Subject: Follow up on enrollment request
- OwnerId: Admin user Id
- WhatId: Enrollment Id
- ActivityDate: Formula (Today + 2)
- Name Flow = Create_Followup_Task → Save & Activate.

Milestone 11 – Reports:

Activity1:Create “Students by Status”Report

- Go to Reports → New Report.
- Select Report Type = Students.
- In Outline, group rows by Status__c.
- Add columns → Name, Email, Phone (and any others you need).
- Click Save → name it Students by Status.

The screenshot shows the Salesforce Reports interface for a report titled "Students by Status". The report is based on the "Students" object and is grouped by "Student Status". The report shows 5 total records. The data is organized into two main categories: "Active (3)" and "Not Active (2)". Each category has a "Subtotal" row. The columns displayed are "Student Name", "Email", and "Phone".

Student Status	Student Name	Email	Phone
Active (3)	Ranya	-	-
	Shanakareshmi	-	-
	Alia	-	-
Subtotal			
Not Active (2)	Kubra	-	-
	Fatiya	-	-
Subtotal			
Total (5)			

At the bottom of the report, there are toggle switches for "Row Counts", "Detail Rows", "Subtotals", and "Grand Total", all of which are currently turned on.

Activity 2: Create “Enrollments by Course” Report

- Go to Reports → New Report.
- Select Report Type = Enrollments.
- In Outline, group rows by Course__r.Name.
- Add Record Count column → shows total per Course.
- Click Save → name it Enrollments by Course.

The screenshot shows the Salesforce Reports interface for a report titled "Enrollments by Course". The report is based on the "Enrollments" object and is grouped by "Course__r.Name". The report shows 5 total records. The data is organized into three main categories: "Business English (2)", "Project Management (1)", and "Salesforce Admin Course (2)". Each category has a "Subtotal" row. The columns displayed are "Enrollment Name" and "Enrollment Count".

Course	Enrollment Name	Enrollment Count
Business English (2)	Get Cloudy	1
	Total Revenue	1
Subtotal		
Project Management (1)	Enrollment Approved - Student Notification	1
Subtotal		
Salesforce Admin Course (2)	Test Enrollment	1
	Test Student	1
Subtotal		
Total (5)		

At the bottom of the report, there are toggle switches for "Row Counts", "Detail Rows", "Subtotals", and "Grand Total", all of which are currently turned on.

Activity 3: Create “Pending Enrollment Approvals” Report

- Go to Reports → New Report.
- Select Report Type = Enrollments.
- Add Filter: Enrollment_Status__c = "Requested".
- Add columns → Student, Course, Owner, Created Date. Click Save →
- name it Pending Enrollment Approvals.

The screenshot shows the Salesforce Reports interface. The report is titled "Pending Enrollment Approvals" and is based on the "Enrollments" report type. It has a filter for "Enrollment_Status__c = 'Requested'". The report displays 3 records. The columns are: Enrollment: Enrollment Name, Student, Course, Enrollment: Owner Name, and Enrollment: Created Date.

	Enrollment: Enrollment Name	Student	Course	Enrollment: Owner Name	Enrollment: Created Date
1	Test Enrollment		Salesforce Admin Course	Ahs Tahmeen k.s	9/23/2026
2	Total Revenue		Business English	Ahs Tahmeen k.s	9/23/2026
3	Enrollment Approved - Student Notification		Project Management	Ahs Tahmeen k.s	9/23/2026

Activity 4: Create "Revenue Report (Fees Paid)" Report

- Go to Reports → New Report.
- Select Report Type = Enrollments.
- Add Filter: Fees_Paid__c = TRUE.
- Group rows by Course__r.Name.
- Add Summary field → Course_Fee__c (or similar fee field).
- Click Save → name it Revenue Report – Fees Paid.

	Subtotal	\$7,000			1
Total		\$7,000			1
Test Student (1)	Salesforce Admin Course (1)	\$7,000	9/23/2026	Rejected	☒
	Subtotal	\$7,000			1
Total		\$7,000			1
Total (3)		\$20,000			3

Milestone 12 – Dashboards:

Activity 1: Create "Student Management Dashboard" Steps:

- Go to Dashboards → New Dashboard.
- Name = Student Management Dashboard.

Select a folder → click Create.

Save inside the chosen Dashboard folder.

Add components:

Donut Chart → source = Students by Status report.

Bar Chart → source = Enrollments by Course report.

Gauge → source = Revenue Report – Fees Paid (sum of revenue field).

- Table → source = Pending Enrollment Approvals report. Click Save →
- Dashboard is ready.

4. Arrange components on canvas.

Milestone 13 – Security Setup

Activity 1: Configure Profiles

- Go to Setup → Profiles.
- Click New Profile (or Clone from existing).
- Create required profiles:
- Admin → Full access (all objects/permissions).
- Enrollment Officer → Create/Update Enrollments__c records.
- Instructor → Read-only access to assigned Enrollments__c.
- Enter Profile Name = Enrollment Officer.
- In Object Settings:
- Enrollment__c → Read, Create, Edit.
- Student__c → Read (add Edit if required).
- Course__c → Read (add Edit if required). Click Save.

- Go to Setup → Profiles → New (or Clone from existing).
- Enter Profile Name = Instructor.
- In Object Settings:
- Enrollment__c → Read-Only.
- (Optional) Student__c / Course__c → Read if you want Instructors to view related info.
- Click Save.

Activity 2: Create Permission Sets

- Go to Setup → Permission Sets → New.
- Create Custom Object Access → grant extra permissions for project-related custom objects (if needed).
- Create Dashboard Editor → enable Create/Customize Reports & Dashboards permissions.
- Assign each Permission Set to the relevant users (Admin, Enrollment Officer, Instructor, etc.).

Activity 3: Configure Sharing & OWD

- Go to Setup → Sharing Settings.
- Under Organization-Wide Defaults, set:
 - Students (Student__c) → Public Read/Write
 - Courses (Course__c) → Public Read/Write
 - Enrollments (Enrollment__c) → Private Click Save.
- For Instructor access to assigned Enrollments, optionally:
 - On Enrollment__c, add a User Lookup field → label it Instructor User.
 - Go to Setup → Flows → New Flow → choose Record-Triggered Flow.
 - Object = Enrollment__c, Trigger = Created or Updated.
 - Add Update Records element → set OwnerId = Enrollment__c.Instructor_User__c.
 - Save Flow as Assign_Enrollment_Owner → Activate.

7. FUNCTIONAL & PERFORMANCE TESTING

During the functional and performance testing phase of the Student Enrollment & Course Management System (SECMS), screenshots were captured from the Salesforce user interface to validate that all implemented features worked correctly. These included the creation of student, course, instructor, and enrollment records, along with validation rule checks for mandatory fields, eligibility criteria, and enrollment constraints. Record type behavior was verified for different course categories, while flows were tested to confirm automated enrollment approvals and seat availability checks. Apex trigger functionality was also validated to ensure automatic confirmation and record updates. In addition, screenshots of generated reports and dashboards were documented to confirm accurate data visualization, enrollment tracking, and performance monitoring. All these screenshots serve as evidence of proper system functionality and efficiency during testing.

8. ADVANTAGES & DISADVANTAGES

Advantages

- Automation of enrollment approvals and seat checks.
- Validation rules ensure data accuracy and enforce constraints.
- Apex triggers handle automatic confirmations and updates.
- Reports and dashboards provide real-time insights.
- Role-based profiles and permission sets improve security.
- Saves time and reduces manual errors.
- Centralized management of students, courses, and enrollments.

Disadvantages

- Requires technical expertise for setup and maintenance.
- Complex flows/triggers may increase system overhead.
- Customization dependency on administrators.
- Private sharing settings may restrict visibility without extra rules.
- Performance issues possible with large datasets if reports aren't optimized.
- User training needed to understand profiles, permissions, and dashboards.
- Initial configuration effort can be high.

9. Conclusion:

TheSalesforce Student Enrollment & Course Management System (SECMS) has proven to be an effective solution for streamlining the entire academic lifecycle. From student registration and course creation to enrollment management, instructor assignment, approvals, revenue tracking, and reporting, the system integrates all processes into a unified platform. By leveraging Salesforce's automation tools—such as validation rules, flows, approval processes, and dashboards—SECMS enhances data accuracy, operational efficiency, and informed decision-making. This project demonstrates how manual academic processes can be transformed into a scalable, reliable, and userfriendly digital solution, ultimately improving both administrative control and the student experience.

10. FUTURE SCOPE

- Integration with Learning Management Systems (LMS) for seamless course delivery.
- Implementation of AI-based analytics to predict student performance and enrollment trends.
- Mobile app development for student and instructor access on the go. Enhanced self-service
- portals for students to manage registrations, payments, and approvals.
- Expansion of automation flows for advanced approval hierarchies and notifications.

11. Appendix

- Screenshots of functional testing (record creation, validation rules, flows, triggers) Screenshots of
- performance testing (reports, dashboards, refresh times).
- Report definitions (Pending Enrollment Approvals, Revenue Report – Fees Paid Students by Status, Enrollments by Course).
- Dashboard configuration (Student Management Dashboard with Donut, Bar, Gauge Table components).
- Profile setups (Admin, Enrollment Officer, Instructor).
- Permission Sets (Custom Object Access, Dashboard Editor).
- Sharing Settings (Organization-Wide Defaults for Students, Courses, Enrollments) Flow design for
- Instructor assignment (OwnerId update via Instructor User lookup) Validation rules list (mandatory fields,
- fees paid before approval, eligibility checks) Approval process configuration for Enrollment requests.
- Object schema (Student, Course, Instructor, Enrollment objects with relationships).
